

The Sun

Do you know the sun is a star? It's our star. We live on a planet called Earth. Earth goes around the sun.

The sun shines in the sky. It gives our planet light. Don't look at the sun. It isn't good for your eyes.

The sun is very, very hot. It makes our planet warm so we can live here.

We get electricity from the sun! Light from the sun shines on solar panels. This makes electricity.

A photograph of a large array of solar panels installed on a roof. The panels are dark blue with a grid of white lines. A bright sun is shining in the sky, creating a lens flare effect over the panels. The sky is a clear, vibrant blue.

Day and Night

Sometimes it's day and sometimes it's night. That's because Earth turns.

When your place on Earth turns toward the sun, you see light from the sun. This is day.

When your place turns away from the sun, you don't see light from the sun. This is night. Then Earth turns and it's day again.

In the Day

At Night

At night it's dark. It's dark in parks and gardens. It's dark in homes, too. People make light with electricity or candles. Is it dark when you go to bed?
