

A: So what did you read?

B: An article about \_\_\_\_\_ we can find new sources of energy.

A: And what have they been doing research \_\_\_\_\_?

B: Well \_\_\_\_\_ developing solar power, but also using the sun to divide water.

A: What do you mean?

B: So water is H<sub>2</sub>O, right?

A: Yeah.

B: So they use sunlight to \_\_\_\_\_ the water \_\_\_\_\_ hydrogen and oxygen.

A: Why?

B: So they can use the hydrogen as \_\_\_\_\_ for cars.

A: OK. Do you think that's possible?

B: Yeah, I think so. Why not? I mean we already have lots of \_\_\_\_\_ and I think they can divide water like that quite easily with sunlight.

A: Wow! That sounds amazing. Are there any \_\_\_\_\_ about it?

B: It doesn't say there are. I think hydrogen can be dangerous, but maybe they know how to deal with that.

A: OK. And it's better than oil I guess. I mean, it doesn't \_\_\_\_\_ climate change.

B: No – that's why it would be good. And I guess really cheap.

A: Cool.
