

## > 2.2 2D shapes and symmetry

### Exercise 2.2

#### Focus

hexagon horizontal line of symmetry  
mirror image octagon pentagon  
polygon symmetry, symmetrical vertical

#### Worked example 2

Where is the line of symmetry in this shape?

If we fold this shape along the dotted line, the 2 sides will match exactly.

That's called the **line of symmetry**. Some shapes have more than one.

Lots of shapes have a line of symmetry.

- 1 Draw a line of symmetry on these pictures.  
Use a mirror to help you.

2 Name the shapes. Write words to describe these shapes.

Use words like side, vertices, vertical lines.
