

Feeding Relationships

1. Drag and drop the names with their correct definitions

MUTUALISM	PREDATION	COMMENSALISM	PARASITISM
-----------	-----------	--------------	------------

One living thing extracts nutrients from another, causing it harm or illness

One living thing catches, kills and eats another

One living thing benefits and the other is not affected

Both living things benefit

2. Select the correct feeding relationship for each example

The spider catches and eats a fly

These fish eat particles of food the shark drops

This little bird is feeding on the pieces of food in the crocodile's teeth

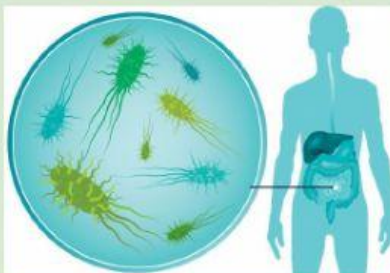

This fungi takes nutrients from the tree and damages the tree

Fleas live by drinking the blood of dogs and other animals

The dung beetle eats elephant excrement

Some bacteria live in your digestive system and help you digest your food

Some bacteria enter living things and give them illnesses

Big fish eat little fish
