

Living beings

1. Fill in the blanks with the words from the word box below.

All living things are organized into different levels. The most basic level is the _____ (1) level. _____ (2) are the smallest units of matter and are made up of protons, neutrons, and electrons.

When atoms come together, they form _____ (3), which are groups of atoms that work together. For example, a very important molecule is _____ (4), which is essential for life.

The next level is the _____ (5) level. _____ (6) are the basic units of life. Similar cells group together to form _____ (7), which are collections of cells that work together to perform a function. Several tissues form an _____ (8), like the heart or the lungs, which carry out specific tasks in the body.

Finally, many organs working together form an _____ (9). For example, the _____ (10) system includes the heart and blood vessels and is responsible for moving blood around the body.

molecules, cellular, atomic, system, circulatory,
atoms, water, cells, tissues, organ

2. Match the Vital Functions with Their Definition:

Nutrition

The process of producing new individuals.

Reproduction

The ability to detect and respond to changes in the environment.

Interaction

The process of obtaining and using energy and nutrients for growth and maintenance.
