PART

New door frame, Measuring tape, Level tool, Screws and screwdriver, Sealant

- 1.First, ensure the doorway is clean and free from debris before starting.
- 2.Measure the doorway using the measuring tape to ensure the frame fits correctly.
- 3.Place the door frame in the opening and use the level tool to ensure it is properly aligned.
- 4.Secure the frame by tightening screws with the screwdriver, making sure it's tightly fixed.
- 5.Finally, apply sealant around the edges to seal any gaps, ensuring the frame is properly installed.

How to Install a Door Frame in a Building Design Project

Steps

How to Set Up a Foundation Layout in a Building Project

- 1.Begin by measuring the area where the foundation will be laid using the measuring tape.
- 2.Mark the layout of the foundation using chalk or string to outline the shape.
- 3.Place wooden stakes at the corners and along the lines to secure the layout.
- 4.Check that all lines are straight and level using the level tool.
- 5.Finally, adjust the stakes as needed to ensure accuracy before construction begins.

- Measuring tape • Hammer
- Chalk or string • Level tool
- Wooden stakes
