

CORDOBA IN FLAMES

In recent days, many fires have affected the province of Córdoba. These fires are very dangerous and are damaging our beautiful nature. It's important to know what is happening and what we are losing.

Córdoba Argentina

Córdoba, is located in central Argentina, it has a rich and diverse range of **flora** and **fauna**, thanks to its varied climate, altitude, and geography.

Fauna

Córdoba has a rich diversity. In the mountainous areas and forests there are **mammals**. You can see tall **deers** and **guanacos**, **gray foxes** and dangerous **pumas**. These animals play an important role in the ecosystem.

Many **birds** live in Córdoba. The **hornero** is famous for its mud nests. Colorful birds like the **woodpecker** are also common and help keep trees healthy by eating insects.

In Córdoba, you can find various **reptiles**. Common reptiles include funny **lizards** and long **snakes**, which are important for controlling insect populations.

Unfortunately, these animals are losing their homes because of the fires.

IN DANGER!

Flora

Córdoba has a variety of **plants**. There are beautiful plants like the **ceibo** and the **lilicac**. These plants provide food and shelter for many animals.

Córdoba is home to many types of **trees**. Some of them are very tall like the **tala** and **eucalyptus**. These trees provide shade, wood, and homes for many creatures, such as birds and insects.

Córdoba is known for its **grasslands**. In the eastern part of Córdoba, there are big and small grasses like **Poa**, **Festuca**, and **Stipa**, which thrive in the fertile soils.
