

# WEB DEVELOPMENT TERMS

"The foundation of any website is \_\_\_\_\_, as it allows you to structure the content using tags like <h1> for headings or <p> for paragraphs."

"With \_\_\_\_\_, you can style your website by changing colors, text sizes, and arranging elements in a grid layout."

"\_\_\_\_\_ makes web pages interactive, enabling things like pop-up messages when a button is clicked."

"The \_\_\_\_\_ is the visual part of a website, where users interact, built with HTML, CSS, and JavaScript."

"The \_\_\_\_\_ is the logic behind the website, managing data and communication with the server."

"React is a popular \_\_\_\_\_ that simplifies the development of dynamic web applications."

"Using a \_\_\_\_\_ like WordPress allows you to create and manage websites without needing to know how to code."

"A website with \_\_\_\_\_ automatically adjusts its layout to fit different screen sizes, from mobile phones to desktop computers."

"Good \_\_\_\_\_ practices help your website rank higher in search engine results, increasing visibility and traffic."

"To make your website accessible to others, you'll need \_\_\_\_\_ to store your files on a server."

"Choosing the right \_\_\_\_\_ is key since it's the web address users will type to find your site."

"An \_\_\_\_\_ certificate ensures that the data exchanged between the user's browser and the server is encrypted, providing a secure connection."

"Before designing the full website, designers often create a \_\_\_\_\_ to outline the basic layout and structure."

"A well-designed \_\_\_\_\_ ensures that users have a smooth and enjoyable experience while navigating your website."

"The \_\_\_\_\_ refers to the website's interface, focusing on its look and feel, ensuring the design is user-friendly and visually appealing."

"An \_\_\_\_\_ allows different applications to communicate with each other; for example, you can use a Google Maps \_\_\_\_\_ API to embed a map on your site."

"The \_\_\_\_\_ stores all the essential information for your website, such as user profiles or product details."

"Using \_\_\_\_\_, developers can quickly create responsive layouts with pre-designed components like buttons and navigation bars."

"A \_\_\_\_\_ is designed to focus on a single goal, such as getting users to sign up for a newsletter or download an app."

"\_\_\_\_\_ refers to how fast your website loads and operates, which is crucial to keeping visitors from leaving due to slow speeds."
