

Give two points of differences –

RES 3

a. Fraternal and Paternal Twins

Name –

b. afforestation and deforestation

Date –

c. Rabi Crops and Kharif Crops

d. Spinning and Weaving

e. Winnowing and Threshing

Afforestation is defined as the planting of the forests in a land which was formerly infertile. Deforestation is defined as the depletion of the forests for human and commercial uses. Afforestation is so important that if we want life on this planet, we need trees. Deforestation is extremely harmful, for the entire environment.

|--|---|
| (i) These crops are sown on the onset of monsoon. | (i) These crops are sown on the onset of winter season. |
| (ii) These crops require lot of water. | (ii) These require moderate water |
| (iii) Rice, maize, paddy etc. are main kharif crops. | (iii) Wheat, barley, peas, gram, etc. |
| (iv) These are harvested in winter. | (iv) Crops are harvested in summer. |

Maternal and paternal twins are two types of twins that occur during the same pregnancy. Maternal twins are formed by the splitting of a fertilized egg in order to develop several fetuses. ... Paternal twins are formed by the separate fertilization of eggs. They are non-identical and dizygotic.

..... is the process of making thread out of raw fibers.
..... is the process of taking threads and making them into cloth.

..... Pounding the sheaves against the wooden bars is performed to remove the grains from the stalks. this is the method of separating the unpleasant husk from food. It is achieved by pouring the grains on a windy day, from a height, when the grains fall on the ground and the husk is blown away.
