

$\frac{1}{2}$		$\frac{2}{2}$			
$\frac{1}{3}$	$\frac{2}{3}$		$\frac{3}{3}$		
$\frac{1}{4}$	$\frac{2}{4}$	$\frac{3}{4}$	$\frac{4}{4}$		
$\frac{1}{5}$	$\frac{2}{5}$	$\frac{3}{5}$	$\frac{4}{5}$	$\frac{5}{5}$	
$\frac{1}{6}$	$\frac{2}{6}$	$\frac{3}{6}$	$\frac{4}{6}$	$\frac{5}{6}$	$\frac{6}{6}$

$\frac{1}{3}$ $\frac{1}{5}$ $\frac{1}{6}$ $\frac{1}{4}$ $\frac{1}{2}$

Order the fractions above from smallest to largest

The smaller the _____ the larger the _____

The larger the _____ the smaller the _____

$$\frac{1}{3} + \frac{1}{3} = \frac{\square}{\square} \quad \frac{1}{4} + \frac{2}{4} = \frac{\square}{\square}$$

$$\frac{5}{6} - \frac{1}{6} = \frac{\square}{\square} \quad \frac{6}{10} - \frac{1}{10} = \frac{\square}{\square}$$

To find $\frac{1}{3}$ of a group, you need to break it up into 3 equal parts. So finding $\frac{1}{3}$ is the same as $\div 3$

$$\frac{1}{3} \text{ of } 33 = \quad \frac{1}{4} \text{ of } 24 = \quad \frac{1}{10} \text{ of } 120 = \quad \frac{2}{5} \text{ of } 20 =$$
