Read the text and labele the following statements true (T) or false (F)?

A Short History of Computers

Computers have a long history, and they did not always look like they do today. The first computers were big machines. In the 1940s, a computer could fill a whole room! These early computers were very slow and expensive. They were mostly used by scientists and governments to solve math problems.

In the 1970s, computers started to get smaller and cheaper. Companies like Apple and IBM made computers that could fit on a desk. More people could now buy computers for work or school. This was the start of the "personal computer," or PC.

In the 1990s, computers became faster and started connecting to the internet. This made computers very popular around the world. Now, people could send emails, read news, and even watch videos online.

Today, computers are small enough to fit in our pockets as smartphones. They are used by people of all ages, for many purposes. The journey from large, slow machines to small, fast devices shows how much computers have changed over time.

- The first computers were as big as a room.
- Computers in the 1940s were mostly used for games and videos.
- In the 1970s, computers became smaller and cheaper, which helped more people buy them.
- The first computers with internet access were created in the 1940s.
- A smartphone is also a type of computer.
- Apple and IBM were two of the first companies to make personal computers.
- The first computers were faster than modern computers.
- Most computers in the 1990s were used only by scientists.

Guess wheter the fact about computers are true or false.

True or False?

1. The first computer mouse was made of wood.
2. The first email was sent in 1995.
3. In 1981, the average computer weighed about 10 pounds.
4. The first hard drive could only hold 5 megabytes of data.
5. The first computer game was a simple tennis game called "Pong."
