

- 1 The Earth's crust is thicker under the oceans than on land.
- 2 The mantle is responsible for the movement of tectonic plates.
- 3 The inner core is a liquid layer of iron and nickel.
- 4 Pangaea was a supercontinent that existed millions of years ago.
- 5 Seafloor spreading occurs at mid-ocean ridges.
- 6 The Kola Superdeep Borehole reached the mantle.
- 7 Convection currents in the mantle are responsible for the movement of oceanic plates.
