

Adding and subtracting simple fractions using the multiple method

$\frac{1}{4} + \frac{3}{8} =$

$\frac{7}{10} - \frac{2}{5} =$

$\frac{6}{12} + \frac{9}{24} =$

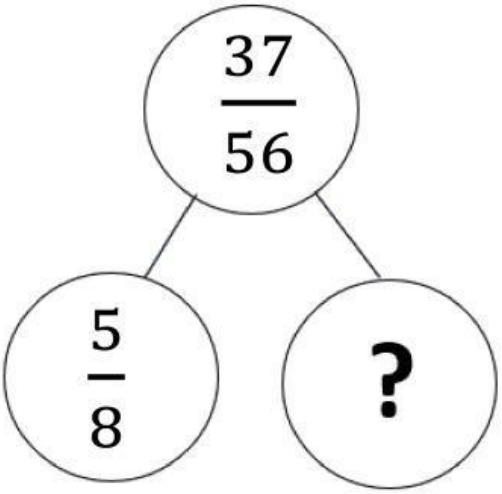

$\frac{17}{27} - \frac{1}{3} =$

$\frac{11}{36} + \frac{2}{6} =$

$\frac{1}{2} - \frac{9}{20} =$

A flower grows $\frac{1}{9}$ of a metre in spring, $\frac{1}{3}$ of a metre in summer and $\frac{1}{6}$ of a metre in autumn.

True or false? The total fraction of growth over the three seasons is $\frac{12}{18}$.
