

Adding and subtracting simple fractions using the multiple method

$$\frac{1}{4} + \frac{3}{8} =$$

$$\frac{7}{10} - \frac{2}{5} =$$

$$\frac{6}{12} + \frac{9}{24} =$$

$$\frac{17}{27} - \frac{1}{3} =$$

$$\frac{11}{36} + \frac{2}{6} =$$

$$\frac{1}{2} - \frac{9}{20} =$$

A flower grows $\frac{1}{9}$ of a metre in spring, $\frac{1}{3}$ of a metre in summer and $\frac{1}{6}$ of a metre in autumn.

True or false? The total fraction of growth over the three seasons is $\frac{12}{18}$.
