

$$\begin{cases} 3a - 10b = 4 \dots (1) \\ a = 2b \dots \dots \dots (2) \end{cases}$$

将(2)代入(1)得

$$3(\quad) - 10b = 4$$

$$(\quad) - 10b = 4$$

$$(\quad) = 4$$

$$b = \frac{(\quad)}{(\quad)}$$

$$b = (\quad)$$

$6b$	$-4b$
------	-------

将 $b = (\quad)$ 代入(2)

$$a = 2(\quad)$$

$$a = (\quad)$$
