

How Do Animals Survive in Winter?

Read the passage.

It gets very cold in winter. However, animals **survive** because of their special habits. Many birds fly **south** in fall. It is warmer there. There is also more food. However, the trip is long and dangerous. So geese fly in large groups. That way, they can **travel** to **faraway** place more safely,

Some animals, like black bears, sleep **through** the winter. They eat a lot of food in the fall. Then they can survive all winter without eating. They also find warm **safe** places to sleep. **Caves** are good sleeping places.

Some animals grow different **fur** in winter. Rabbits

get thicker fur to stay warm. Other animals also change color. For example, Arctic foxes are brown in summer. But their fur turns white in winter. It helps **hide** in the snow.

Use the words in bold red to match word-definition.
