Read the article about nature and mental health and choose the correct answer for each question.

Nature and Stress

Modern lives have become busier. Even when there is no one with us, we feel the stress of social media. For a lot of us, this increased stress is having a bad effect on our mental health. It makes us feel unhappy and worried. Luckily, exercise, sleep and improved diet help us relax, and so does the power of nature.

Have you ever stood at the top of a mountain and felt your worries disappear? Whether we are alone, or with other people, being close to nature makes us feel happier and more relaxed about our lives. It becomes easier to forget our worries and to pay attention to the world. This helps to improve our focus.

The benefits of nature have been known for a long time. However, in recent years, scientists have discovered even more advantages. They believe that nature can help people with less serious mental health conditions. They think that in some cases, it can even be as effective as traditional medicine. The idea has become popular and some mental health charities have even begun to recommend nature to their patients.

When we are stressed, our bodies produce certain chemicals. Many scientists believe that sitting outside and looking at the view reduces these chemicals. They suggest that a ten-minute walk, three or four times a week, can really make a difference. The experience is not about exercise, but the way your mind changes when you are in a natural environment.

In one study, researchers asked people to spend time in a natural environment. They tested their levels of stress chemicals before the experiment. They then tested them again two weeks later at the end of the process. The results showed nature reduced the stress of each of the volunteers. It also showed that the people who had spent the most time in nature had the most benefit.
