

ANGOLI SUPPLEMENTARI

Due ANGOLI sono **SUPPLEMENTARI** se la loro somma è un **ANGOLO PIATTO**

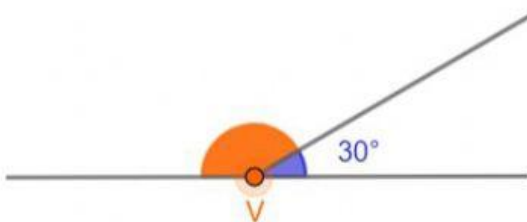

SE $\alpha = 45^\circ$
 $\beta = 180^\circ - 45^\circ = 135^\circ$

Determina l'ampiezza dell'angolo supplementare a quello dato:

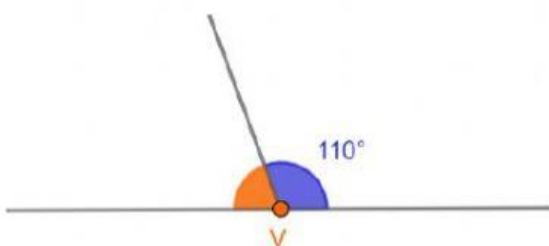

SE $\alpha = 80^\circ$

$\beta = 180^\circ - \quad^\circ = \quad^\circ$

SE $\alpha = 30^\circ$

$\beta = \quad^\circ - \quad^\circ = \quad^\circ$

SE $\alpha = 110^\circ$

$\beta = \quad^\circ - \quad^\circ = \quad^\circ$
