Belarus has a humid continental climate with four distinct seasons and a sharp contrast between severe winters and warm summers.

The average annual temperature is 5.8 degrees Celsius. Average monthly temperatures vary by 24 ^{0}C, ranging ..... -6 degrees Celsius ..... average in January ..... that of 18 degrees Celsius ..... summer.

Belarus has an average annual precipitation (rain and snow) of 550 to 700 mm, spread evenly throughout all months.

The average number of sunlight hours in Minsk is 1815 (of 4383 possible). It means that it is sunny 41,4 % of daylight hours. The remaining 58,6 % of daylight hours are cloudy, foggy or misty, mostly from October ..... March.

..... general, there are no significant (great) differences between the districts of Belarus, due ..... the small size of the country.

The climate is influenced ..... the country's inland location, the domination of flat relief and relative remoteness (отдалённость) ..... the Atlantic Ocean.

..... the whole, the climate of Belarus is mild, which means you can experience various weather in various seasons and enjoy doing various things.
