Breaker Blocks + Order Blocks Indicator on TradingView - Free - [TradingFinder]

The **Breaker Block + Order Block (BBOB) Indicator** identifies the **overlap between Order Blocks and Breaker Blocks**, highlighting potential **price reaction zones**. These overlaps, within the framework of the **ICT trading style**, act as **support and resistance levels**.

LIVEWORKSHEETS

Order blocks are areas on the chart where large financial institutions and **high-volume** traders place their orders. Due to the high volume of **buy (Buy)** or **sell (Sell)** orders, these zones are critical for price **reversals** or **temporary trend** pauses.

BBOB Indicator Specifications

The table below displays the specifications of the indicator in a summarized format:

Category	ICT - Liquidity - Support & Resistance
Platform	TradingView
Skill Level	Advanced
Indicator Type	Continuation - Reversal
Time Frame	Multi-timeframe
Trading Style	Intraday Trading
Markets	Cryptocurrency - Forex - Stocks - Commodities

Indicator Bullish Trend

In the crude oil price chart **(WTI)**, a **Demand-Overlapping Block** forms, initiating an upward trend. Due to the high volume of **orders** and **liquidity**, this zone acts as a strong support level.

After returning to this zone, the price absorbs the available **liquidity** and continues its upward movement.

Crude Oil (WTI) Price Chart

Indicator Bearish Trend

In the **GBP/USD currency pair** chart, after forming a **Supply Overlapping Block**, the price initially gathers liquidity from this zone and then declines sharply.

Upon revisiting this zone, the selling power diminishes, and the price moves downward with less intensity. However, this zone remains a valid resistance level.
