ACD Indicator for MetaTrader 4 Download - Free - [TF Lab]

The **ACD indicator**, developed by **Mark Fisher**, is a technical analysis tool in **MetaTrader 4** that is used to identify potential trends and measure the strength of market trends.

The **ACD system** is based on identifying the **market's Opening Range (OR)** and using it to determine key trading levels. The opening range is usually the first 30 minutes to one hour of trading.

After deciding on the **OR**, traders can identify points **A** and **C** derived from the **OR** and make trading decisions. These levels are above or below the **OR**, which the market must reach for a potential trend to break.

Indicator Table

Indicator Category	Price Action - Levels - Supply and Demand
Platforms	MetaTrader 4
Trading Skills	Intermediate
Indicator Types	Range - Breakout
Timeframe	5 minutes - 15 minutes - 30 minutes
Trading Style	Scalping - Day Trading
Trading Instruments	Forex – Stocks - Commodities

In the image below, the price chart of the **EURUSD** currency pair is shown in a 15-minute time frame. A buy signal is initially issued when the price moves above the **A up** level and stabilizes for 7 minutes, indicating the start of an **uptrend** and entry into a **buy trade**. A sell signal is also issued when the price breaks below the **A down** level and stabilizes below it for 7 minutes, indicating the start of a **downtrend** and entry into a **sell trade**.

Buy and Sell Signals of the ACD Indicator

Overview

The **ACD trading strategy** is a breakout strategy that performs best in volatile or strongly trending markets, such as crude oil (Brent) and stocks. If the price is above the **Pivots**, the trend is bullish; if it is below the **Pivots** and **MT4 levels indicator** , the trend is bearish. The **ACD strategy** is a technical tool used to measure the balance between **Supply and Demand** in the market. By analyzing the volume and price of trades, this indicator helps traders identify the trend's strength and suitable entry and exit points.

Bullish Signal Conditions of the Indicator (Bullish Setup)

In the image below, the price chart of **Gold (XAUUSD)** is shown in a 15 minute time frame. When the **A up** line is broken, it is recommended to wait for a while to ensure it is not a **Fake Breakout** and the price stabilizes above this line. Eventually, the price should stabilize on the **A up** level for 7 minutes, after which you can enter a **buy position**.

Take Profit and Stop Loss for Buy Trades of the ACD Indicator

After entering the trade, the best stop loss you can choose is below the **A down** line. The appropriate **Reward to Risk** ratio for this strategy is 1, which you can use to set your take profit.
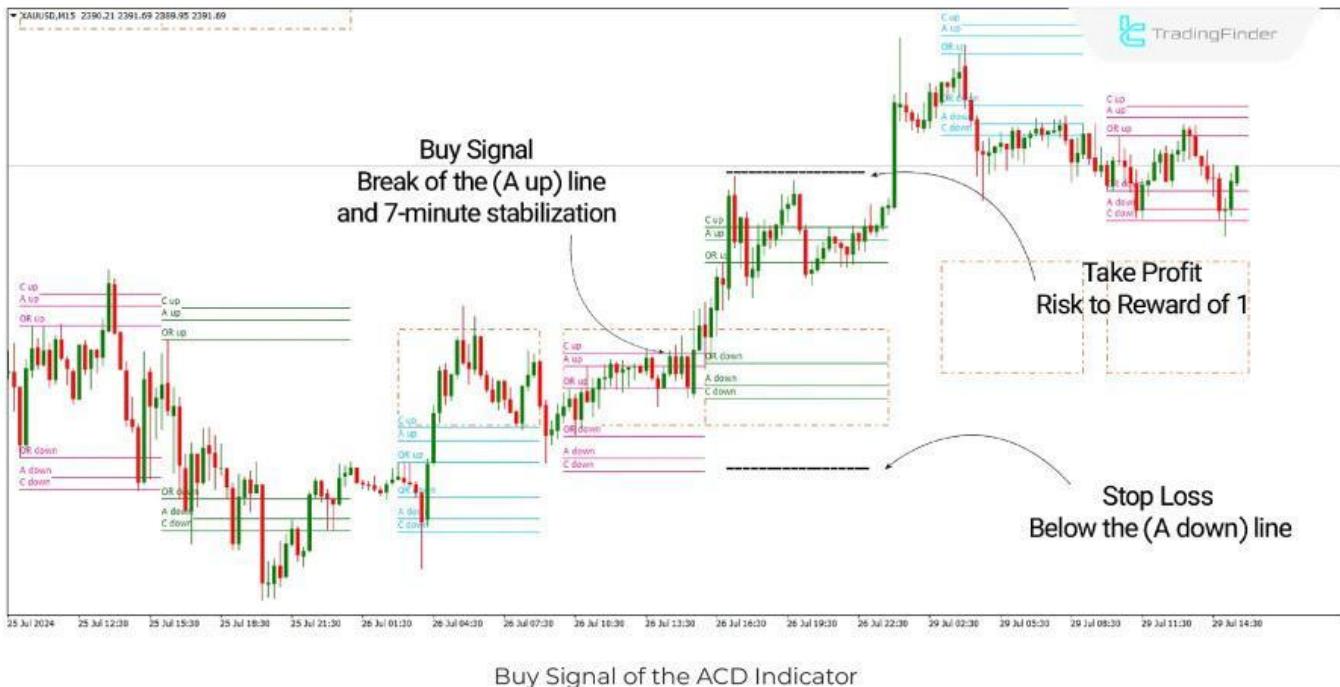

Buy Signal of the ACD Indicator

Bearish Signal Conditions of the Indicator (Bearish Setup)

In the image below, the price chart of **Texas Oil (WTI)** is shown in a 30-minute time frame. When the **A down** line is broken, it is recommended to wait for a while to ensure it is not a **Fake Breakout** and the price stabilizes below this line. Eventually, the price should stabilize below the **A down** level for 7 minutes, after which you can enter a **sell position**.

Take Profit and Stop Loss for Sell Trades of the ACD Indicator

After entering the trade, the best stop loss you can choose is above the **A up** line. The appropriate **Reward to Risk** ratio for this strategy is 1, which you can use to set your take profit.

  - **C Level Multiplier (%):** The percentage distance of the **C** lines is 8

  - **Color of New York Lines:** New York session color is **yellow** or as desired

Summary

The **ACD indicator,** an **indicator in MetaTrader 5**, can identify high-potential levels for trading as a strategy. It can also be used for different time frames and trading styles, helping determine market direction by comparing the current price to the**Opening Range (OR)**. Additionally, this indicator provides suitable entry and exit points for trades.
