

Use the phrases from topic #1 (Progress).

THE JOURNEY OF A PROJECT: FROM BARE BONES TO COMPLETION

Starting a new project is always an exciting challenge, but the process of bringing an idea to life can be anything but straightforward. Whether you're working on a business proposal, a novel, or a home renovation, the journey is filled with ups and downs, moments of progress, and occasional setbacks.

At the beginning, things can feel overwhelming. You might have _____ (the skeleton of) an idea, but turning it into something meaningful takes time. You need to _____ it _____ (make it more detailed), and ensure that everything starts to _____ (develop a clear form). It's easy to get lost in the process, but as long as you're _____ (progressing correctly), even small victories can be motivating.

Of course, progress isn't always linear. There are times when you might feel like you're just _____ (not progressing), unable to move forward. Worse, you could be _____ (returning to the same issue), making effort but not seeing results. Sometimes, after countless _____ (small improvements) and adjustments, you might realize you need to _____ (to go back to the beginning) or even _____ (begin from nothing). While frustrating, this can be an important step in ultimately getting things right.

However, perseverance pays off. With each revision, you _____ (make progress), slowly but surely improving your work. You _____ (polish) the details, give things a few last _____ (small improvements), and _____ (finish some unfinished tasks). Every small adjustment is _____ (a positive action), and before you know it, you're more than _____ (50% complete).

Of course, there may be times when you unintentionally make _____ (a wrong move). But recognizing these moments helps you correct your course and push ahead. Eventually, as you _____ (make progress fast) in your progress, the finish line becomes visible. Before long, the project is _____ (almost done).

That is, if you actually _____ (find time to do it)! Too often, people _____ (plan) to do something but keep postponing it. _____ (unfinished) tasks pile up, and suddenly, you're _____ (back to the beginning). The key to success is to stay focused, recognize when adjustments are needed, and keep moving forward.

So the next time you're faced with a daunting project, don't panic. Take it one step at a time, make the necessary _____ (small improvements), and keep pushing ahead. And if someone asks how it's going, just smile and say, _____ ("I'm taking care of it!").
