

LIVEWORKSHEET - GRADE 4 – SEASONAL CHANGES

I. Choose the correct word

As humans, we wear different clothes in summer and winter. We to the changing weather. But how are plants and animals adapted to the seasons?

In many parts of the world, is the season when leaves change from green to yellow and red. Plant leaves are green because they contain a green substance called The chlorophyll in the leaves helps to produce for the tree. During autumn, days become and there is less sunlight. The leaves are no longer able to produce food for the tree.

Some animals cannot find food to eat during the winter. These animals have two choices to: stay where they are and or to a warmer region. Hibernation describes how the animal's body goes into a for a long period of time. When seasons change and there is no longer enough food to eat, some animals have to walk long distances to a region where there is food. This is called a

II. Based on the text above, write True or False

1. All animals cannot find food to eat during the winter.
2. Hibernation describes how the animal's body goes into a deep sleep for a long period of time.
3. The chlorophyll in the leaves helps to produce seeds for the tree.
4. At the end of autumn the days are getting shorter and colder.
5. When seasons change and there is no longer enough food to eat, some animals migrate to warmer regions where there is food.
6. Hibernation describes how the animal's body goes into a deep sleep for a short period of time.
