Propulsion Block (ICT) Indicator for MT4 Download - Free - [TradingFinder]

The **Propulsion Block Indicator** (ICT Propulsion Block) for **MetaTrader 4 Indicators** is an advanced tool to identify price movements and high liquidity areas. This indicator highlights critical order block areas that overlap with **Supply and Demand Zones**.

The **Propulsion Blocks** appear after an **order block** formation and activate upon price reversal to this zone. **Bullish order** blocks are marked in **green boxes**, **bearish order blocks** are marked in **red boxes**, and propulsion blocks are marked in **light green**.

Bullish Trend Conditions in the Propulsion Block Indicator

The **EUR/USD** chart displays in a 4-hour timeframe; as the price reaches the order block (**green box**), the reversal candle acts as a propulsion block (**light green area**). This reversal collects liquidity, leading to a price increase and marking an ideal **long** trade area.

Bearish Conditions in the Propulsion Block Indicator

On the **4-hour EUR/USD** chart, a price reversal is expected to gather liquidity as the price reaches the **order block** (red area). Here, the reversal candle (**light red**) acts as a propulsion block, after which the price initiates its **Short** trend.
