

Risk to Reward Ratio (Multiple Orders) Indicator for MT4 - Download - Free - [TFLab]

TradingView [MetaTrader4](#) [MetaTrader5](#)

The **Risk to Reward Ratio** indicator is a tool in **MetaTrader 4 indicator** that identifies the ratio between the stop loss (SL) and take profit (TP) levels in trades. After opening a trade in MetaTrader and setting the SL and TP, the price difference between these levels and the entry point (Entry) is calculated and displayed as a ratio in the top left corner of the chart.

Traders can use this ratio to manage money and identify their **risk-to-reward** ratio (profit potential). This **MT4 Money management indicator** can also be used for multiple trades on different symbols.

TP relative to the entry, resulting in a risk-to-reward ratio of **1:2**, meaning the trader potentially risks **\$80** to earn \$160.

Risk to Reward Ratio in Buy Trades

Risk to Reward Ratio in Sell Trades

In the image below, you see the price chart of **Binance Coin (BNB)** in a 30-minute timeframe. A **sell trade** (Sell) is opened for **\$502**, with stop loss and take profit levels set. In sell trades, the take profit is below the entry, while the stop loss is above it.

The **Risk Reward Ratio** indicator calculates the price difference between SL and TP relative to the entry, showing a risk-to-reward ratio of **1:3**, meaning the trader potentially risks **\$50** to earn \$150.
