# ASSESSMENT

## I. Matching Type

**Directions:** Read the following questions carefully. Match the Hydrometeorological Hazards in Column B with their descriptions in Column A. Type the letter of the correct answer on the space provided.

COLUMN A	COLUMN B
<p>_____ 1. Overflowing of normal bodies water or its accumulation over areas that are not normally submerged</p> <p>_____ 2. Tropical Cyclones with maximum wind speed of 118 to 184 kph</p> <p>_____ 3. Increase in the temperature of Eastern and Central Pacific ocean waters.</p> <p>_____ 4. Overflowing of water in a short period of time caused by heavy precipitation</p> <p>_____ 5. Occurs when dry, moist air, rises to cooler regions of the atmosphere</p> <p>_____ 6. Cold ocean temperature in Equatorial Pacific</p> <p>_____ 7. Abnormal sea level rise during tropical cyclones</p>	<p>A. El Niño</p> <p>B. Flashflood</p> <p>C. Flood</p> <p>D. La Niña</p> <p>E. Storm surges</p> <p>F. Thunderstorm</p> <p>G. Tropical Cyclone</p> <p>H. Typhoon</p>

## II. Fill in the blanks.

**Directions:** Fill in the blanks with words that complete the thought of the concept.

1. Tropical cyclones that exceed the wind speed of 185 kph are called \_\_\_\_\_.

2. Thunderstorms are storms produced by \_\_\_\_\_.

3. The increase of below-normal rainfall conditions during El Niño could bring \_\_\_\_\_ which could negatively impact agricultural livelihood.
