

Directions: Read the following Informational Fiction text. Then answer the questions.

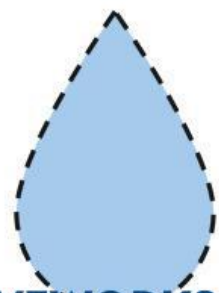

The Story of Water

Once upon a time, there was a little drop of water named Wally. Wally loved to change his shape and feel different things. One sunny day, Wally was sitting in a pot on the stove. As the stove got warmer, Wally felt himself getting hotter and hotter. Suddenly, he started to turn into steam and float up into the air. Wally was now a gas!

Later, Wally floated high into the sky where it was cooler. He got colder and colder until he turned back into water droplets, joining his friends in a cloud. Wally was a liquid again!

Finally, on a chilly night, Wally decided to rest on a leaf. The air was so cold that Wally turned into a little ice crystal. He was now a solid!

Wally the water drop was so happy that he could be a solid, liquid, and gas, depending on how warm or cold he felt.

Answer:

What happens to Wally the water drop when he is heated on the stove?

When Wally the water drop floats into the sky and joins a cloud, what state is he in?

What state does Wally turn into when he rests on the cold leaf at night?
