

CISD-CID + BPR Combined Indicator in ICT Style MT4 Download - Free - [TFlab]

The **CISD-CID + BPR Composite Indicator** in MetaTrader 4 is a technical analysis tool based on the **ICT trading style**. This **MT4 Liquidity indicator** utilizes the concepts of "**CID**," "**CISD**," and "**BPR**" to mark key zones on the chart and issue entry signals at appropriate times.

"**CISD**" combines four concepts consolidation, impulse, fluctuation, and divergence. Simply put, there are zones in a trend where the price lacks a clear direction and fluctuates within a narrow range to attract liquidity.

According to the "**CISD**" concept, exiting these zones is accompanied by rapid movement (**Impulse**).

The indicator identifies such patterns and marks them as a line on the chart. Whenever the **CISD line** is broken, the indicator issues trade entry signals.

The "**CID**" concept refers to the transfer of order flow and a shift in price direction. This concept complements "**CISD**" and is crucial in predicting corrective moves or the start of new trends.

Indicator Specifications Table

Indicator at a Glance

BPR refers to zones in the **market where the price fluctuates** within a relatively fixed range, and there is a **balance between** buyers and sellers. **ICT** traders use these **zones as key areas** for trade entry, **as exiting these zones** is often accompanied by a strong movement.

The image below shows green boxes representing **Bullish BPR Zones**, red boxes representing **Bearish BPR Zones**, and invalid zones displayed in blue.

Analysis of BPR Zones

 **LIVEWORKSHEETS**

CISD-CID + BPR Buy Signal

According to the **Cardano** cryptocurrency chart, in the 30-minute timeframe, the price first touched the larger **CISD** line and then moved upwards.

If the price breaks the smaller **CISD** line, the indicator issues a buy signal with a green arrow, indicating a **Long Position** entry.

Issuing a Buy Signal Based on the Cardano Chart

CISD-CID + BPR Sell Signal

The price chart of the **AUD/USD** currency pair in the 1-hour timeframe shows how the sell signal is issued.

As seen in the image, a corrective movement began after the price touched the larger **CISD** line. If the downtrend breaks the smaller **CISD** line, the indicator issues a sell signal with a red arrow, indicating a **Sell Position** entry.

Issuing a Sell Signal Based on the AUD/USD Chart

Indicator Settings

CISD-CID + BPR Combined Indicator Settings

- ⚡ **Light theme:** Chart theme settings;
