

STL & ITL & LTL Indicator for MetaTrader 4 Download (ICT) - Free - [TFlab]

The **STL, ITL, and LTL Indicator** in **MetaTrader 4 indicators** is a practical tool for traders seeking to identify **short-term (STL), mid-term (ITL), and long-term (LTL) price lows**.

This indicator is designed based on the **ICT trading style** and helps traders recognize **key market reversal points**.

Indicator Table

Category	ICT - Liquidity - Trend Strength
Platform	MetaTrader 4
Skill Level	Intermediate
Indicator Type	Continuation - Reversal
Timeframe	Multi-Timeframe
Trading Style	Intraday Trading
Market	Cryptocurrency - Forex - Stocks

Indicator in an Uptrend

In the uptrend of the **CAD/JPY** currency pair, the price consistently breaks its short-term and mid-term lows before forming a long-term low (**LTL**).

This pattern indicates a price reversal, and to sustain this trend, the price must not break the newly formed **long-term low**. Otherwise, there is a potential for trend reversal.

Traders, upon confirming the price trend, can place their stop-loss before the **long-term low (LTL)** and enter a **Buy** trade.

CAD/JPY Currency Pair

Indicator in a Downtrend

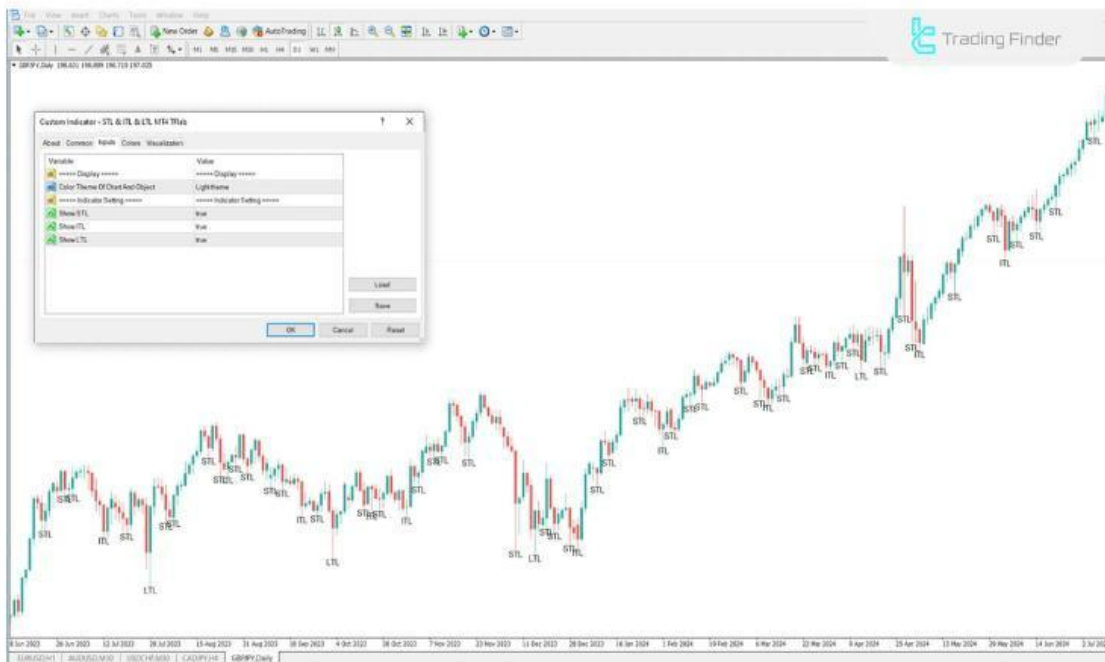

In the **USD/CHF** 5-minute price chart, the price, after forming a **long-term low (LTL)**, fails to create a new high.

Following this inability to form a high, the price breaks its recent **long-term low**, and with confirmation of the break, continues its downtrend.

USD/CHF Currency Pair

Indicator Settings

Indicator settings

- ⚡ **Color Theme of Chart and Object:** Background color of the chart;
- ⚡ **Show STL:** Displays short-term lows;
- ⚡ **Show ITL:** Displays mid-term lows;
- ⚡ **Show LTL:** Displays long-term lows.

Conclusion

Traders use **STL**, **ITL**, and **LTL** to identify key support and resistance levels, potential reversal points, and trend confirmations.

By understanding the hierarchy and relationships among these lows, traders can predict market movements, plan trades based on their strategies, and achieve profitability.
