

Volume Weighted Average Price Bands (Forex & Crypto) Indicator on TradingView

The **VWAP Bands (Volume-Weighted Average Price Bands)** indicator specifically evaluates **price changes** in relation to **daily trading volume**. This tool is included in the **TradingView indicators** and is essential for understanding the impact of **trading volume** on the **price trend** of an asset.

The **VWAP Bands Indicator** calculates the **weighted average price** over a specified time period by combining **price** and **volume**.

VWAP Bands Indicator Specifications

The table below provides a general overview of the specifications of the Volume Weighted Average Price (VWAP) Bands indicator:

⚡ Trading Style:	Day Trading Tradingview Indicators	
	TradingView Indicators in the Forex Market	
⚡ Trading Instruments:	Cryptocurrency Tradingview Indicators	
	Share Stocks Tradingview Indicators	

Overview of the Indicator

The mid-level of VWAP corresponds to the **VWAP line**, which reflects the average price weighted by trading volume over a specific period. The levels above and below the VWAP represent areas where the price moves relative to the VWAP value. These levels are considered **support and resistance boundaries** for the price.

These levels can act as **dynamic support and resistance zones**. When the price is above VWAP, the lower levels might serve as support. Conversely, when the price is below VWAP, the upper levels might act as resistance.

Indicator in an Uptrend

In the price chart of the **USD/JPY currency pair**, when the price moves above VWAP, this indicates an **uptrend** or positive movement in the market.

Traders generally interpret these conditions as a **buy signal**.

Indicator in a Downtrend

The price chart of **Bitcoin (BTC)** in a 15-minute time frame is displayed. When the price falls below VWAP, it signals **selling pressure** and a **downtrend** in the market.

In such cases, the market tends to move downward, recognized as a **sell signal** or a negative trend.
