

Daily Profile London Reversal and New York Continuation – ICT style

Understanding **daily profile trading** in the **London and New York sessions** is a key concept in **ICT trading methodology**.

This concept refers to price movements occurring during specific timeframes in the **London session**, setting the stage for further price action in the **New York session**.

ICT-Based Strategy for the London and New York Session Daily Profile

Understanding Kill Zones and the London Session

To fully grasp the **daily profile for London and New York trading**, traders must first understand **Kill Zones**.

Kill Zones are specific time periods in trading sessions where **significant price movements** take place. The primary sessions include **Asia, London, and New York**.

For this analysis, we will focus on:

- ↳ **London Session Kill Zone:** 2:00 AM - 5:00 AM EST (Winter) | 3:00 AM - 6:00 AM EST (Summer)
- ↳ **New York Session Kill Zone:** 8:30 AM - 12:00 PM EST (Winter & Summer)

What is the London Reversal?

The **London Reversal** refers to a **classic daily candlestick pattern** where price expands in one direction before reversing and continuing in the opposite direction. This movement occurs in two scenarios:

Bullish London Reversal

For a Bullish Reversal in the London Session, Consider the Following Points:

- ↳ The price **declines during the London session** before reversing and moving higher;
- ↳ The reversal is typically confirmed with a **Market Structure Shift (MSS)**;
- ↳ The movement continues into the **New York session**, completing the **daily candlestick formation**.

Bearish London Reversal

For a Bearish Reversal in the London Session, Consider the Following Points:

- ↳ The price **rises during the London session** before reversing and moving lower;
- ↳ The bearish reversal is confirmed with a **market structure change** and continues in the **New York session**.

Example Bullish London Reversal

In a **5-minute XAU/USD chart**, a bullish reversal pattern is observed. During the London session, the price initially declines before reversing upwards.

This movement is often accompanied by an entry into a **Fair Value Gap (FVG)** or an **equilibrium level**. The continuation of this move in the **New York session** targets **liquidity zones**.

Bullish Trend in the Daily Profile for London Reversal and New York Session Move

Example Bearish London Reversal

In a **15-minute EUR/USD chart**, the price reaches a **session high** in the **London session** before reversing downward.

During this reversal, traders can enter **sell positions** as price approaches a **Fair Value Gap (FVG)**. The move continues in the **New York session**, breaking previous lows.

Bearish Trend in the ICT-Based Daily Profile Strategy for London and New York Sessions

Combining the London and New York Sessions for London Reversal

In some cases, the price reaches a **key level at the end of the London session** and retests the same level during the **New York session** before continuing towards liquidity targets.

Key Considerations for Using the London Reversal Strategy

Successful **London Reversal** trading relies on **identifying market structure shifts**, utilizing **Order Blocks (OBs) for trade entries**, and setting **stop losses at key levels like previous day highs or lows**. These factors help traders **manage risk effectively** and optimize their entries.

Conclusion

The **daily profile for London and New York trading** is a core strategy in **ICT trading**, helping traders identify **key market movements**.

The **London Reversal** plays a crucial role in **daily candlestick formations**, with its continuation into the **New York session** providing further trading opportunities.

By analyzing **key levels such as FVGs, Order Blocks**, and implementing proper **risk management**, traders can enhance their performance and capitalize on market movements across these sessions.
