

1. Scomponi i seguenti numeri in fattori primi e scrivi le moltiplicazioni. Segui l'esempio

$$30 = 5 \times 2 \times 3$$

$$24 = \dots \times \dots \times \dots \times \dots$$

$$32 = \dots \times \dots \times \dots \times \dots \times \dots$$

144			256			525	3		624	

Scrivi la moltiplicazione

$$144 = \dots \times \dots \times \dots \times \dots \times \dots \text{ oppure con le potenze} = \dots \times \dots$$

$$256 = \dots \times \dots \times \dots \times \dots \times \dots \times \dots \text{ oppure} = \dots$$

$$525 = \dots \times \dots \times \dots \text{ oppure} = \dots \times \dots$$

$$624 = \dots \times \dots \times \dots \times \dots \times \dots \text{ oppure} = \dots \times \dots$$

2. Indica con X le frazioni equivalenti a  $\frac{1}{2}$  :

$$\frac{3}{5} \quad \frac{2}{3} \quad \frac{5}{10} \quad \frac{12}{6} \quad \frac{4}{8} \quad \frac{2}{10} \quad \frac{50}{100} \quad \frac{9}{45}$$

3. Indica con X le frazioni equivalenti a  $\frac{1}{3}$  :

$$\frac{4}{12} \quad \frac{9}{3} \quad \frac{3}{15} \quad \frac{2}{6} \quad \frac{10}{30} \quad \frac{3}{8} \quad \frac{12}{36} \quad \frac{7}{35}$$

4. Indica con X le frazioni equivalenti a  $\frac{2}{3}$  :

$$\frac{10}{15} \quad \frac{6}{8} \quad \frac{8}{27} \quad \frac{12}{18} \quad \frac{9}{21} \quad \frac{22}{33} \quad \frac{35}{45}$$

5. Indica se le frazioni sono proprie (P), improprie (I).

$$\frac{3}{4} \quad \frac{10}{11} \quad \frac{6}{10} \quad \frac{4}{5} \quad \frac{1}{2} \quad \frac{3}{2} \quad \frac{9}{4} \quad \frac{6}{5} \quad \frac{5}{8}$$
