

Today I learned how to make a \_\_\_\_\_ puppet theater. We will need a \_\_\_\_\_ of light that can be \_\_\_\_\_ like the sun or \_\_\_\_\_ like a flashlight. We will need to create a screen, where light can \_\_\_\_\_ after \_\_\_\_\_ in the puppets that will be created in black cardboard which is an \_\_\_\_\_ material. We all know that opaque material will make light \_\_\_\_\_, whereas transparent material will make light \_\_\_\_\_ and translucent material will make light \_\_\_\_\_. First, we shine a light behind the puppets. The \_\_\_\_\_ blocks the light and makes a \_\_\_\_\_ on the screen.
