# Stop Hunting Training - Triggering Stop Losses of Retail Traders - ICT

Stop hunting is a process in which the market is designed to **trigger the stop losses** of **retail traders**, with these movements ultimately benefiting **institutional** traders and market makers.

Stop Hunting Areas of Retail Traders

Stop Hunting in the **ICT style** refers to a scenario where the price triggers a **stop-loss** order with a **shadow (wick)** and then reverses direction toward the **take-profit level**. This phenomenon is also known as "**stop-loss hunting**."
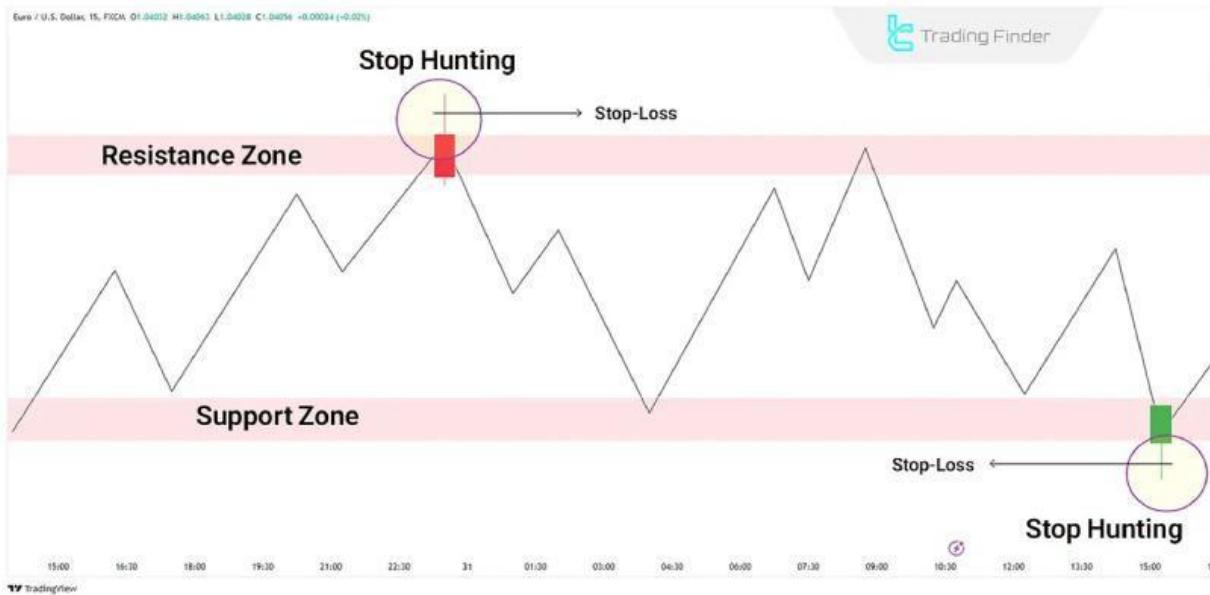

Examining the Mechanism of Stop Loss Hunting in Stop Hunting

Objectives of Stop Hunting

Smart Money executes stop hunting for several reasons:

Liquidity Extraction

Stop-loss levels are known as areas of high **order volume**. Large market players use these orders to **facilitate trades** and **absorb liquidity**.

Narrowing Price Spread

Market makers use **stop-hunting** to generate sufficient liquidity, enabling them to reduce the cost of **entering** or **exiting** large trades.

Creating Volatility

Stop Hunting induces stress among **retail traders**, leading to impulsive decisions. These actions benefit market makers by creating Volatility in the market.

How Does dose Stop Hunting Works

Market makers identify areas where numerous stop-losses are placed, such as **below support**, **above resistance,** or **near-round numbers**.

Then they drive the price toward these areas with significant **trade volumes**. Once **stop-losses** are triggered, a large number of orders enter the market to create **liquidity in Forex**.

This liquidity allows major **market makers** to execute large trades at more favorable prices. Afterward, the price often returns to its original direction.
