Group 3- Hazza Al Mansoori: A Journey Beyond the Sky

Hazza Al Mansoori was born on September 13, 1983, in the quiet village of Al Wathba, located in Abu Dhabi, United Arab Emirates. As a child, Hazza was curious, brave, and full of dreams. He often looked up at the night sky, imagining what it would feel like to fly among the stars. Inspired by planes and space exploration, he knew from a young age that he wanted to become a pilot.

With a clear goal in mind, Hazza worked hard and joined the UAE Armed Forces, where he trained to become a military pilot. His skills and strong determination helped him earn a position as a fighter pilot in the UAE Air Force. He flew powerful jets and completed many missions, always showing leadership, discipline, and courage.

In 2018, something amazing happened—Hazza was chosen to be part of the first group in the UAE Astronaut Program. He trained with astronauts from around the world, learning how to live and work in space. His training included wearing a space suit, floating in zero gravity, and practicing emergency situations.

On September 25, 2019, Hazza made history. He launched into space aboard the Soyuz MS-15 spacecraft and traveled to the International Space Station. For eight days, he lived in space, conducted science experiments, and shared messages with students back on Earth. Hazza became a national hero and a symbol of hope for young people across the UAE.

He returned safely to Earth on October 3, 2019, filled with pride and new knowledge. But his journey did not stop there. On December 7, 2020, Hazza was appointed as the operations manager at the UAE Astronaut Office. Now, he helps prepare future astronauts and supports new space missions.

Hazza Al Mansoori's story shows us that with hard work, passion, and persistence, even the biggest dreams can come true. He is more than just an astronaut—he is a role model for those who dare to dream big.
