Task 2: Read and write True / False

Energy is very important in our daily life. We use energy to cook food, light our homes, and power machines. There are two types of energy sources: renewable and non-renewable.

Renewable energy comes from sources that will not run out, such as the sun, wind, and water. Solar panels use sunlight to produce electricity. Wind turbines use wind to create power. These types of energy are clean and safe for the environment.

Non-renewable energy comes from fossil fuels like coal, oil, and gas. These sources can cause pollution and will run out one day. Burning coal or oil produces a lot of smoke and makes the air dirty.

Today, many countries are using more renewable energy to protect the Earth. We should try to save energy and use clean sources to make our planet greener.

1. We use energy only for cooking.

2. Wind and sunlight are examples of renewable energy.

3. Non-renewable energy will never run out.

4. Burning fossil fuels causes air pollution.

5. Solar panels use wind to produce electricity.

6. Many countries are using more renewable energy now.

7. Renewable energy is bad for the environment.

8. Fossil fuels like oil and gas are non-renewable.
