

TGIF Trading Setup; Identifying Price Targets with Fibonacci Levels in ICT Style

The **TGIF (Thank God It's Friday) Setup** is an **ICT trading pattern** that analyzes **price movements on Fridays**.

TGIF Trading Strategy in ICT Style

This setup focuses on price behavior in the **final hours of the trading week**, helping traders identify **potential trading opportunities**.

What is the TGIF Trading Setup?

The **TGIF (Thank God It's Friday)** trading strategy is a **daily algorithmic pattern** that appears **exclusively on Fridays**.

In trending markets, the price often **returns to the weekly range** after forming the **weekly high (Highest) or weekly low (Lowest)**.

The **ICT TGIF setup** allows traders to **identify Friday's price reversal** and take advantage of it in their trades.

How Does the TGIF Setup Form?

The **ICT TGIF Setup** is based on **repeating price patterns throughout the trading week**. This strategy focuses on **price returning to the weekly range during the final hours of the week**.

Typically, after a week of volatility, the market tends to **retrace back to the weekly range**, creating **favorable trading opportunities**.

TGIF Trading Strategy in Weekly Range in ICT Style

Steps to Use the ICT TGIF Setup

Follow these **four steps** to effectively use the **TGIF Setup**:

#1 Identify the Weekly High or Low

On **Friday**, the market tends to **form a weekly high or low**. These levels are typically established between **morning and afternoon sessions (New York Times)**.

#2 Wait for a Market Structure Shift (MSS)

After forming the **weekly high or low**, traders should wait for a **Market Structure Shift (MSS)** or a **Change in State of Delivery (CISD)**. These events **confirm the price reversal towards the weekly range**.

#3 Enter the Trade at Optimal Levels

Once the **market structure shift is confirmed**, traders can enter trades at **optimal points**, such as **Fair Value Gaps (FVGs)** or **Order Blocks (OBs)**.

#4 Set Price Targets Using Fibonacci Levels

Using the **Fibonacci retracement tool**, traders can determine price correction targets.

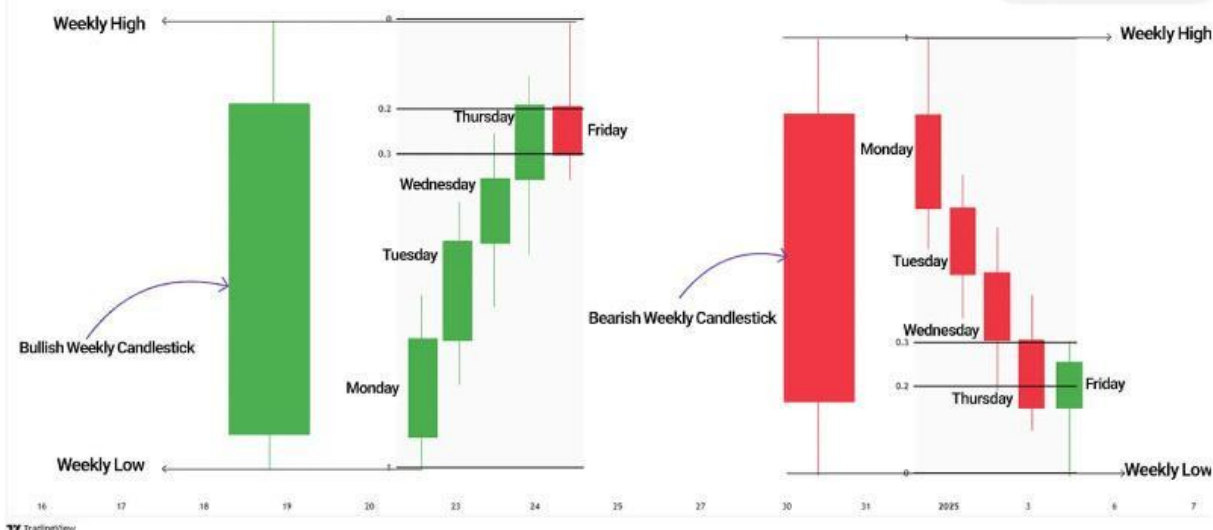

By setting Fibonacci **from the weekly low to the weekly high (for a bullish week)** or **from the weekly high to the weekly low (for a bearish week)**, the **0.20 and 0.30 levels** can be used as profit targets. **Fibonacci Settings for the TGIF Setup:**

Start	1
End	0
First Profit Target	0.20
Second Profit Target	0.30

The method for setting price targets using the Fibonacci tool is illustrated in the image below:

U.S. Dollar Index, 1h, TYC O:108.056 H:108.056 L:107.923 C:107.921 +0.124 (+0.11%)

Targeting using Fibonacci in the TGIF setup in ICT

How to Trade a Bullish TGIF Setup?

In the **EUR/USD 5-minute chart**, the price continues to **decline** until it reaches a **key level** in a higher timeframe.

After a **Change in the State of Delivery (CISD)** and the formation of an **Order Block (OB)** or **Fair Value Gap (FVG)**, traders can enter **buy (long) trades** targeting the **0.2 and 0.3 Fibonacci levels**.

Euro / U.S. Dollar, 15, FVG O:1.03744 H:1.03757 L:1.03735 C:1.03750 +0.00006 (+0.01%)

Bullish Trading Strategy in the TGIF Setup in ICT Style

How to Trade a Bearish TGIF Setup?

In the **USD/JPY** chart, the price **initially moves upward** before reversing downward **towards a significant level in a higher timeframe**.

After identifying a **Market Structure Shift (MSS)** and forming an **Order Block (OB)** or **Fair Value Gap (FVG)**, traders can enter **sell (short) trades** targeting the **0.2 and 0.3 Fibonacci levels**.

Bearish Trading Strategy in the TGIF Setup in ICT Style

Key Considerations for Using the TGIF Setup

Following these key points can increase accuracy and reduce errors when using the **TGIF Setup**:

Pay Attention to Timing

The setup is most effective during the **final hours of Friday (between 1:30 PM – 2:00 PM New York Time)**. During this period, the market often **returns to the weekly price range**.

Analyze Price Behavior

Observing **repetitive price patterns** helps identify a **return to the weekly average**. For instance, if the price reaches a **major support or resistance level** during the week, it may retrace back to the **weekly mean on Friday**.

Use Technical Confirmations

Applying **other ICT concepts** helps confirm price reversals. For example, after a **weekly high or low forms in the New York session on Friday**, a **Market Structure Shift (MSS)** and the formation of an **FVG in the opposite direction** serve as confirmations for a **return to the weekly range**.

Market Conditions

The **TGIF setup** works best in markets with **high liquidity** and **significant volatility** throughout the week, such as **Forex** and **Stock Indices**.

Conclusion

The **TGIF Setup (Thank God It's Friday)** in **ICT trading style** is a powerful strategy for identifying **price reversals** and **entering trades on Fridays**.

By focusing on **weekly highs and lows**, traders can capitalize on **potential retracements** at the end of the trading week.

Using **tools like Fibonacci retracements, Fair Value Gaps (FVGs), and Order Blocks (OBs)** helps define **precise price targets** and improve trade execution.
