

ICT One Trade Setup For Life Trading Strategy

The **ICT One Trade Setup For Life** is a trading method designed based on **market analysis and liquidity identification**.

ICT One Trade Setup For Life Trading Strategy in Bearish Daily Bias

This model is suitable for **day trading and scalping**, as it identifies key liquidity points and market shifts.

What is the ICT One Trade Setup For Life?

The One Trade Setup For Life is a structured trading model based on key ICT principles such as:

- ◆ **ICT Daily Bias**
- ◆ **Draw on Liquidity (DOL)**
- ◆ **PM Session Liquidity Raid**
- ◆ **London Session Liquidity Raid**
- ◆ **Opening Range Gaps**
- ◆ **New York Lunch Liquidity Raid**
- ◆ **AM Session Liquidity Raid**

The One Trade Setup For Life **repeats consistently** and is applicable for **both scalping and day trading**. This **ICT Strategy** is a **standalone model** and does not require any additional trading approach.

What is the Draw on Liquidity (DOL)?

In simple terms, **liquidity in Forex** refers to the **availability of buyers and sellers in the market**, allowing for smoother trade execution. In trading, liquidity represents **areas where buy or sell orders can be quickly executed**.

"**Draw on Liquidity**" (DOL) refers to the **liquidity sweep** that targets active traders' **stop-losses** or triggers pending orders (**Buy Stop or Sell Stop**).

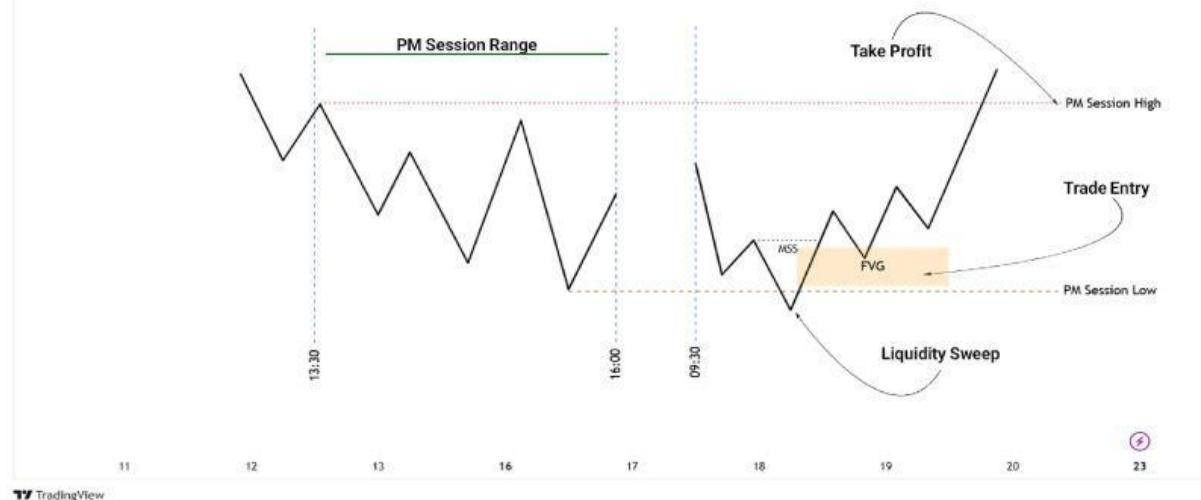

DOL is the key factor **determining a price movement's direction and primary objective**.

How to Trade the ICT One Trade Setup For Life?

To trade using the model, follow the **steps explained by ICT**:

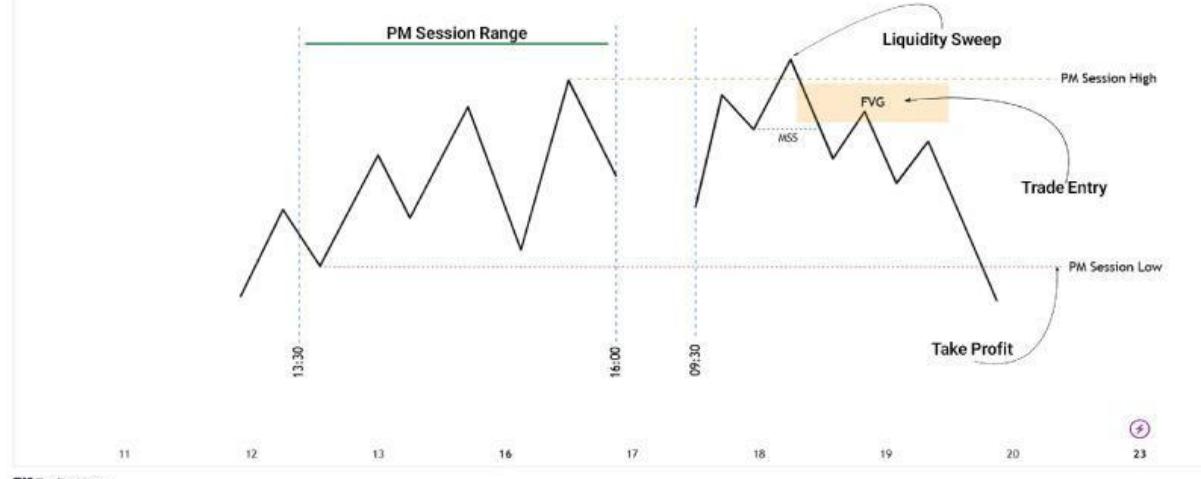

1. Identify **Daily Bias** and the **Draw on Liquidity (DOL)**;
2. Mark the **highest high and lowest low** of the selected range (typically the **PM session from 1:30 PM to 4:00 PM NY time**);
3. Wait for a **sweep** above the high or below the low of the chosen range in the **opposite direction** of the identified bias;
4. Look for an **FVG (Fair Value Gap) with Displacement**, preferably with a **Market Structure Shift (MSS)**. From this point, target **opposite-side liquidity levels** or other liquidity areas.

Below is the **schematic of the bullish setup** for **ICT One Trade Setup For Life**.

Bullish One Trade Setup For Life

Below is the **schematic of the bearish setup for ICT One Trade Setup For Life**.

Bearish One Trade Setup For Life

The **recommended entry time** is between **9:30 AM to 11:00 AM Eastern Time**. Setting **the trading session time zone to New York local time** is essential.

Below are the **setup conditions for different session timeframes**.

PM Session Ranges

The **PM session range** reflects **the price movement of the previous day**. This range covers the **timeframe from 1:30 PM to 4:00 PM NY time**. To identify liquidity points:

1. **Mark the session high (Higher High) and low (Lower Low);**
2. **Above the session high lies Buy-Side Liquidity (BSL);**
3. **Below the session low lies Sell-Side Liquidity (SSL).**

In a **bullish daily bias**, the price moves **below the PM session low**, sweeping **SSL** and creating an **ICT Judas Swing**.

The price moves **above the PM session high** in a bearish daily bias, sweeping **BSL**.

London Session Liquidity Raid

If the **PM session range** is **irrelevant** or the price has moved significantly away, the **London Session Liquidity Raid** is used instead.

The London session range is from 2:00 AM to 5:00 AM NY time, often leading to a major **Liquidity Raid** before the New York open.

During the **New York opening**, price is expected to:

- ◆ Move **below the London session low** in a **bullish scenario**;
- ◆ Move **above the London session high** in a **bearish scenario**.

Opening Range Gaps

Opening Range Gaps occur at **8:30 AM for forex** and **9:30 AM for indices**.

In a **bearish daily bias**, the price moves towards the **opening range gap**, sweeping liquidity built in the morning and during the **New York lunch period**.

New York Lunch Liquidity Raid

If no liquidity sweeps have occurred earlier, the **New York Lunch Range** is examined from **12:00 PM to 1:30 PM NY time**. Price may:

- ◆ Move **towards the session high**, initiating a **bearish move**;
- ◆ Move **towards the session low**, initiating a **bullish move**;

AM Session Liquidity Raid

The **final liquidity target is based on the previous day's AM session range (9:30 AM to noon).**

- ◆ For a bullish setup, the session high is the target;
- ◆ For a bearish setup, the session low is the target.

Conclusion

The **ICT One Trade Setup For Life** provides a **comprehensive trading framework** designed based on a **detailed analysis of market movements and liquidity zones**.

This model helps traders by introducing **discipline, predictability, and structure** in their trading approach.

Following the setup, traders can confidently execute their strategies and take advantage of **repeatable trading opportunities**.
