

ICT Asian Range Trading Strategy – Liquidity Sweep & Daily Bias

The **“ICT Asian Range”** strategy focuses on price movements during the **Asian trading session [from 7 PM to midnight New York time]**.

The **Asian Range Trading strategy** does not rely on complex indicators or advanced algorithms. Instead, it depends on the trader's ability to observe and interpret price movements within a **specific timeframe**.

Example of Trading Setup based on ICT Asian Range Strategy

trading. **Asian Range Advantages:**

- ⚡ **Early market insights:** The Asian Range sets the **daily market trend**, allowing you to anticipate market sentiment earlier.
- ⚡ **Liquidity indicators:** It reveals how major players are positioning themselves, offering clues about **potential price movements**.
- ⚡ **Volatility prediction:** The price volatility during this session acts as a guide for predicting the **level of volatility** in subsequent sessions.
- ⚡ **Risk management:** The Asian Range provides suitable levels for setting **stop-loss** and **take-profit**

How to use the ICT Asian Range Strategy?

To effectively execute the ICT Asian Range strategy, follow these steps:

1. **Identify the Asian Range:** Observe **price movements** during the Asian session and pay attention to key fluctuations.
2. **Mark the range:** Highlight the **highest** and **lowest prices** during this period, as these levels become key reference points.
3. **Analyze breakouts:** Monitor price movements beyond the defined range; such movements indicate **potential market changes**.
4. **Examine market context:** Align your analysis with overall market trends **Daily Bias** to improve trading accuracy.
5. **Execute trades:** Open positions based on breakouts or reversals from the range.

Implementing the ICT Asian Range Strategy in Bullish Conditions

1. **Drawing the range:** Extend the Asian high and low to future sessions to frame your trading setup.

2. **Looking for dips:** In a bullish market, wait for the price to **dip below the Asian low**, **liquidity sweep** and trapping traders.
3. **Entry options:** After sweeping the Asian low, consider the following actions:
 - ⚡ Enter a buy position below the **midnight New York session open price**, but not before the **Asian low** is swept.
 - ⚡ Buy when the price reverses and breaks **above the Asian high**, confirming the **bullish** trend.
 - ⚡ If the buying opportunity below the midnight open is missed, wait for the price to return to the **Asian high** during the **New York open**.

After sweeping the Asian Range liquidity, look for an ICT Market Structure Shift (MSS) to confirm the price reversal.

Example of the ICT Asian Range Strategy in a bullish trend on the GBP/USD 5-minute chart

Implementing the ICT Asian Range Strategy in Bearish Conditions

- ⚡ **Drawing the range:** Similar to bullish conditions, extend the range to future sessions for setup alignment.
- ⚡ **Looking for breakouts:** In a bearish market, wait for the price to rise

above the Asian high, sweeping liquidity and trapping traders.

⚡ **Entry options:** After sweeping the Asian high, consider the following actions:

⚡ Enter a sell position **above the midnight New York open price**, but not before the **Asian high** is swept.

⚡ Sell when the price reverses; the **bearish** trend is confirmed when the price breaks **below the Asian low**.

⚡ If the selling opportunity **above the midnight open** is missed, wait for the price to return to the Asian low during the New York open.

After sweeping the Asian Range liquidity, look for an ICT **Market Structure Shift (MSS)** to confirm the price reversal.

What setups complement the Asian Range Strategy?

Integrating **the ICT Asian Range strategy** with other setups enhances your trading success rate:

⚡ **Breakout Strategy**

- ⚡ Enter trades when the price exits the Asian Range.
- ⚡ Use volume or other indicators to confirm the breakout and increase the probability of success.

- ⚡ **Fair Value Gap Strategy**

- ⚡ Identify significant price gaps formed during breakouts.
- ⚡ Use the **Fair Value Gap** (FVG) as entry or exit points to profit from price discrepancies.

- ⚡ **Indicator Integration**

- ⚡ Combine Asian Range analysis with **RSI, MACD, or moving averages** for a multi-faceted approach.
- ⚡ Analyze multiple timeframes for a comprehensive understanding of market conditions and trends.

How to manage risk in the ICT Asian Range Strategy?

- ⚡ **Position sizing:** Adjust position size based on risk tolerance and account size.

- ⚡ **Stop-loss placement:** Use the boundaries of the Asian Range to determine logical stop-loss levels.

- ⚡ **Risk-reward ratio:** Execute trades with an appropriate risk-reward ratio (e.g., 1:2) for favorable outcomes.

Key tips for improving the Asian Range Strategy

1. **Utilize confluence:** Combine the **trading strategy** with other analysis methods to generate stronger signals.

2. **Monitor volume:** Unusual volume provides additional insights and validates trade ideas.

3. **Risk management:** Use stop-loss orders to manage position size and preserve capital.

4. **Maintain a trading journal:** Document your results to refine the strategy over time.

Conclusion

The **ICT Asian Range Strategy** is designed based on price movements during the Asian session. This **ICT strategy** allows traders to identify the **Asian Range**, analyze **breakouts**, and consider the overall market context for effective trading.
