

Now, typically, we think of frogs as living in wet env\_\_\_\_\_.

B\_\_ for frogs who live in dry pl\_\_\_\_\_, with desert-like conditions, this can b\_\_ a problem. Frogs have been a\_\_\_ to survive in such areas by having different physical features, special dry-cl\_\_\_\_\_ features that help t\_\_\_ maintain an adequate level of moisture in their cells and avoid drying out.

S\_\_\_ frogs do this by preventing water loss thr\_\_\_\_\_ their skin. By creating a s\_\_\_ of covering over their skin, they greatly red\_\_\_ their skin's exposure to the dry air. The covering acts li\_\_ a barrier that locks in mois\_\_\_\_\_.

A specially modified internal organ inside th\_\_\_ bodies enables them t\_\_ have a high water-storage capacity. So the frogs a\_\_ able to absorb a\_\_ store moisture du\_\_\_\_\_ wet rainy times which they can rely o\_\_ to get through d\_\_ periods.

When it does rain, the frog absorbs **wa** \_\_\_\_ through its skin and its bladder stretches to hold this **ext** \_\_\_\_ water. The water is then **slo** \_\_\_\_ released from the special bladder into the frog's internal **tiss** \_\_\_\_ until the next rain which might not **b** \_\_\_\_ for **sev** \_\_\_\_\_ months.

And how new **busi** \_\_\_\_\_ owners often encounter a **I** \_\_\_\_ of obstacles. But one **w** \_\_\_\_ to get an easier start is through franchising. That's when there's already a well-**kn** \_\_\_\_ , established company **a** \_\_\_\_ you open up a new branch of that **comp** \_\_\_\_ in a new location. Your new business will be a part **o** \_\_\_\_ the larger established company with the **sa** \_\_\_\_ name and it'll be run just like the **ot** \_\_\_\_ branches of that company.

Now, one great advantage of franchising **i** \_\_\_\_ that the company provides training to you and all of **y** \_\_\_\_ employees. They teach you about **a** \_\_\_\_ the aspects of the business **a** \_\_\_\_ you're given a plan to follow for success. So, you don't **h** \_\_\_\_ to do the training yourself or come **u** \_\_\_\_ with your own business **p** \_\_\_\_ .

For ex \_\_\_\_\_, if you're opening up a new division of a restaurant that sells piz \_\_\_, say. Somebody from the company will come to the restaurant that you're op \_\_\_\_\_ and they'll train you and your empl \_\_\_\_\_ in how to prepare the pizzas, how t\_ take food orders, plus everything about h\_\_ to operate the restaurant so it'll be run exa \_\_\_\_\_ like all the other restaurants in t\_\_ company.

The restaurant is alr \_\_\_\_\_ well-known because it has such good pizza. So when you open your o \_\_ restaurant with the same name in a new loc \_\_\_\_\_, people know your pizza's going to b\_ really good, t \_\_\_. They'll go to your restaurant bec \_\_\_\_\_ they already trust they'll h \_\_\_ a good experience there.

Roads, paved ro \_\_\_ are everywhere and sometimes seem I \_\_\_ part of the natural landscape. But, of cou \_\_\_, roads are not part of nature and, in fact, road construction can have harmful ef \_\_\_\_\_ on the environment and seriously impact b \_\_\_ animal life and plant I \_\_\_.
