The Importance of Conserving Clean Air

Clean air is essential for the health of all living beings. However, due to pollution from vehicles, factories, and human activities, the quality of the air we breathe is decreasing every day. Poor air quality can cause serious health problems and damage the environment. Therefore, we must take action to protect and conserve clean air for ourselves and future generations.

Firstly, air pollution harms human health. Breathing polluted air can lead to diseases such as asthma, lung cancer, and heart problems. Children and the elderly are especially vulnerable. By reducing emissions from cars and factories, we can lower the risk of these illnesses.

Secondly, polluted air damages the environment. It contributes to acid rain, which harms plants, animals, and even buildings. Air pollution also increases the greenhouse effect, which causes global warming. By conserving clean air, we help slow down climate change and protect ecosystems.

Thirdly, clean air improves our quality of life. People feel better and can be more active when the air is fresh and free from harmful particles. Cities with clean air attract more visitors and provide a healthier environment for everyone.

In conclusion, conserving clean air is not an option, but a responsibility. Everyone can help by planting trees, reducing car use, using public transport, and saving energy at home. Let's work together to protect our air—because every breath we take depends on it.

Answer the questions below by choosing true or false for each of the following statements.

1. Clean air is not very important for human and animal health.
2. The quality of air is decreasing because of pollution from cars, factories, and human actions.
3. Breathing clean air can cause asthma and lung cancer.
4. Reducing emissions from vehicles and industries can help improve air quality.
5. Air pollution does not affect buildings or animals.
6. Polluted air contributes to climate change through the greenhouse effect.

7. Clean air can improve people's quality of life and attract tourists to cities.

8. Only governments can conserve clean air; individuals cannot help.

9. Planting trees and using public transportation are ways to help conserve clean air.

10. Conserving clean air is a shared responsibility that benefits everyone.
