

Our planet is full of weird and wonderful creatures. Meet three of them – animals with surprising bodies, habits and abilities.

### The animal that can't be true

When in 1798 zoologists in Britain first saw the skin of an Australian platypus and a drawing of the animal, they were sure it was a hoax. A creature like that could not exist. Why not? First, it has **fur**, like cats and dogs, **5** but also a flat bill like a duck, and a big thick tail like a beaver. Secondly, it lays eggs and looks after them like a bird, but when the young come out of the eggs, the mother **feeds** them with her milk. On top of everything, the platypus has a **poisonous** sting – like a snake! It **10** cannot kill a human, but it's very painful.

A platypus

- 1 Scientists thought the platypus could not be real because
  - A it had strange fur.
  - B its bill was a funny shape.
  - C the drawing they saw was poor quality.
  - D it had the body parts of different animals.
- 2 A platypus
  - A eats eggs.
  - B looks after its young in the same way as birds do.
  - C can hurt you.
  - D has a tail like a snake.
