

How Technology Changed Communication

Read the text and complete the activities: multiple choice, true/false, and matching.

In the past, teenagers used letters or landline phones to communicate. Today, instant messages, video calls, and social media are the most common ways to stay in touch. Technology allows teenagers to send photos, videos, and voice messages in seconds. Video calls make it possible to see friends and family even if they are far away. Social media platforms such as Instagram or TikTok help people share their experiences with the world. However, technology can also have negative effects. Spending too much time on screens can reduce face-to-face communication and cause health problems. For this reason, it is important to use technology in a balanced way.

1. Multiple Choice section

In the past, teenagers used mainly...

- a) Social media
- b) Letters and landline phones
- c) Video calls
- d) TikTok
