Essay Writing Exercise

Read the two texts below.

Write an essay summarising and evaluating the key points from both texts. Use your own words throughout as far as possible, and include your own ideas in your answers.

Write your answer in **240–280 words**.

The Value of Space Exploration

Supporters of space exploration argue that investing in missions to other planets benefits humanity as a whole. The technologies developed for space travel often find everyday applications, from medical devices to communication systems. Furthermore, space projects inspire innovation, foster international cooperation, and satisfy humanity's natural curiosity about the universe.

A Waste of Resources

Critics point out that space exploration diverts huge sums of money from urgent problems on Earth. Poverty, healthcare, and climate change require immediate attention, yet governments continue to spend billions on rockets and research with uncertain results. Many argue that this is a luxury that benefits only a few, while the majority of people see no direct improvements in their daily lives.

Write your **essay**.
