

**PRACTICE WORKSHEET-1****The Busy Life of Honeybees**

The honeybee is a small but very useful insect. It lives in groups called colonies. Inside the hive, bees work in an orderly way. The queen bee lays eggs, while worker bees collect nectar from flowers. They change the nectar into honey and store it in the honeycomb. Drones are male bees, and their job is to help the queen. Honey is not only sweet but also healthy. It gives us energy and helps to cure cough and sore throat. Bees also help in pollination, which means transferring pollen from one flower to another. This process helps plants to produce fruits and seeds. Without bees, many crops would not grow properly. Bees are hardworking, social insects. We should protect them because they are important for nature.
