

Human Body

The human body is a wonderful machine with many parts. Read the clues given and name the parts of the body. Pick the answers from the Help box :

1. This organ, which lies behind the stomach on the left side of the body, produces juices called enzymes, which help the body to digest food. _____
2. This pea-shaped organ situated beneath the liver stores concentrated bile and plays an important role in the digestion of food. _____
3. Sometimes called a gullet, this is a muscular tube through which food passes from the mouth to the stomach. _____
4. This is the single largest internal organ in the human body. It produces bile and changes food into chemicals so that the body can grow and work properly. A disease of this organ is hepatitis. _____
5. This gland is located at the base of the neck. It produces a hormone that regulates the rate at which food is converted into energy. _____
6. This sense organ also helps the body to keep its balance. _____

KNOW MORE

1. Did you know that your body has ten times the number of bacteria cells than the total number of cells that make up your body
2. Our bodies have almost as many hair follicles as do chimpanzees. It's just that our hair is so fine that we cannot see most of it.
