Achilles helps his father fishing at the weekends.		
All the children go to school in Benin		
Achilles can speak French.		

READING COMPREHENSION

2. **Preberi članek in odgovori na vprašanja. Odgovori naj bodo kratki.**

WILL LIFE BE WORTH LIVING IN 2035 AD?

July 22, 1961, Weekend Magazine

What sort of life will you be living 74 years from now? Scientists have looked into the future and they can tell you.

You will be transported to work in monorail vehicles at 200 miles an hour. Your house will probably have air walls, and a floating roof, adjustable to the angle of the sun. Doors will open automatically. People will build the heating and cooling systems into the furniture and carpets.

You will have a home control room – an electronics centre, where messages will be recorded when you're not at home. This will play back when you return, and also give you up-to-minute world news. You will have wall-to-wall TV, an indoor swimming pool and TV-telephones.

The status symbol of the year 2035 will be the home robot help, which will help parents to take care of the children, and cook the meals. Cooking will be done in solar ovens with microwave controls.

LIVEWORKSHEETS

Food won't be very different from 1961, but there will be a few new dishes for example instant bread, sugar made of sawdust, and synthetic tea. Energy will come in tablet form.

At work, parents will operate on a 20 hour week. Because of that, parents will have more time for each other and they will also be able to spend more time with their children. The offices will be air-conditioned with stimulating scents and extra oxygen. There will be machines that will do the work of clerks, shorthand writers and translators.

The family cars will be soundless. The engine will be smaller than a typewriter. Railways will have one central dispatcher, who will control a whole nation's traffic. Jet trains will be guided by electronic brains.

It looks as if everything will be so easy that people will probably die because of sheer boredom. Maybe you disagree, but on the other hand, this article isn't science fiction. It is a science fact-futuristic idea.

a) When was the article published?

.....

b) What means of transport will people use to go to work?

.....

c) Where will the messages be recorded when you are away from home?

.....

d) What will help parents to look after their children in the future?

.....

e) Where will people cook their meals?

.....

f) What will people drink in the future?

.....

g) How long will people spend at work?

.....

h) What will cars be like in the future?

.....
