Strange Sea Creatures 22

Look at the pictures of some strange sea creatures. Read the descriptions given below and try to identify them. Take help from the Help line.

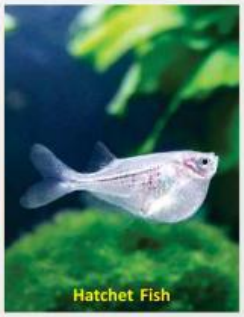

1. Though resembling sea horse they are actually much larger. They have leaf-like extensions attached to their body which look exactly like seaweed. This helps them to hide from predators. _____
2. This is the most venomous animal. There strings are so excruciating that most human victims go into shock, down or die of heart failure. _____
3. This fish when feels threatened, it becomes rounder by swallowing a large quantity of water and almost double in size. The spines stick out from all sides, making it look like a spiky football. _____
4. This is very dangerous fish. If threatened, it stabs its attacker with its poisonous spines. _____
5. It looks like a creature from prehistoric times. This fish has big thick scales on its body. It lives in the deep water of the Indian Ocean. _____
6. It is slim fish with a long upper jaw shaped like a sword. It uses its long pointed snout to kill its prey. _____
7. This fish lives in the dark deep sea water. It has many light-producing organs along its body to attract other small fish on which it feeds. _____
8. This is the longest bony fish in the sea-about 11 m. It is also known as the regalecidae. It has a snake-like body with a red fin running along the entire length of its body. _____
9. This fish has giant eyeballs that point upwards so it sees prey from below as silhouettes against the surface. _____
