What's for dinner?

A  Listen and draw lines.

Swans

Example

Swans are the largest water birds
..... in the world. You often see wild
swans on lakes or rivers. Most swans are white,
1 but you can see black swans in
some countries.

2 Swans look lovely but be careful if one
..... really near to you. If a swan
3 suddenly frightened, it will try
to fly away and might hurt you. Swans have
really strong wings!

4 Their necks are than any other
birds' necks because they use them to help find
5 food in the water. In a river are
lots of plants and insects for swans to eat!

Swans live together in pairs or families. Young
swans don't usually leave their parents
6 the next new babies join the
family.

7 Some swans don't like winter weather so
when it starts getting colder,
wonderful birds begin the long journey
8 warmer environments.

9 Wild swans usually live for about twenty years
but swans live in places like
10 zoos live for fifty years!
