Communication In the future

Today we have mobile phones, email and video chats; but how will we communicate in the future? Four young scientists tell us what they think will happen:

In a few years, everyone will wear computers. You can do lots of things with these computer glasses. You can find information, get directions, make a video, take a photo and send a text. They're fantastic!

George, 12

Soon we will have 3D browsers to find information on the internet. We will see and touch web pages. Perhaps we will interact with websites physically. It will be an amazing, virtual world.

Dennis, 11

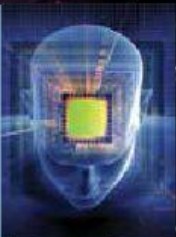

In 2020, we won't use phones or webcams to talk. We will have holograms! You will be able to see the person you are talking to in 3D in front of you. The holograms will work through the internet.

Jenna, 13

In 20 or 30 years, we won't need computers. We will have a microcomputer in our brains. Our brains will connect to the internet. We will be able to make a phone call and send a text by thinking!

Katie, 12

1 Read and match.

- | | |
|---------------------|------------------------------|
| 1 soon | microcomputers in our brains |
| 2 in a few years | computer glasses |
| 3 in 2020 | hologram phone calls |
| 4 in 20 or 30 years | 3D internet |

2 Read again and answer the questions.

1 What can the computer glasses do?

They can find information, get directions,

2 What will you be able to do with a 3D browser?

3 Where will you see the holograms?

4 How will we make a phone call in 20 or 30 years?

3 How do you think we will communicate in the future?

We will ...

We won't ...
